FOR IMMEDIATE RELEASE

Spotsylvania, Va. — December 27, 2018 — Perigean Technologies was awarded a three-year, \$2.3MM contract to support the United States Digital Service at the Department of Veterans Affairs (DSVA).

Under the contract, which is the second such award for Perigean from the Department of Veterans Affairs in 2018, Perigean will support DSVA's efforts in obtaining feedback from a diverse population of Veterans on design concepts and prototype software. DSVA is a startup at The White House aimed at using design and technology to deliver better services to the American people. Their work for the VA is guided by a core principle: that every digital touchpoint that a Veteran, Service member, caregiver, or family member has with the VA should be designed with users, not for them.

Veterans interested in participating can review details for participation and register at <https://veteranusability.us>.

Perigean Technologies provides cognitive systems engineering and expertise management services and solutions for government and commercial clients. For more information, contact Brian Moon at (540) 429.8126 or brian@perigeantechnologies.com.
